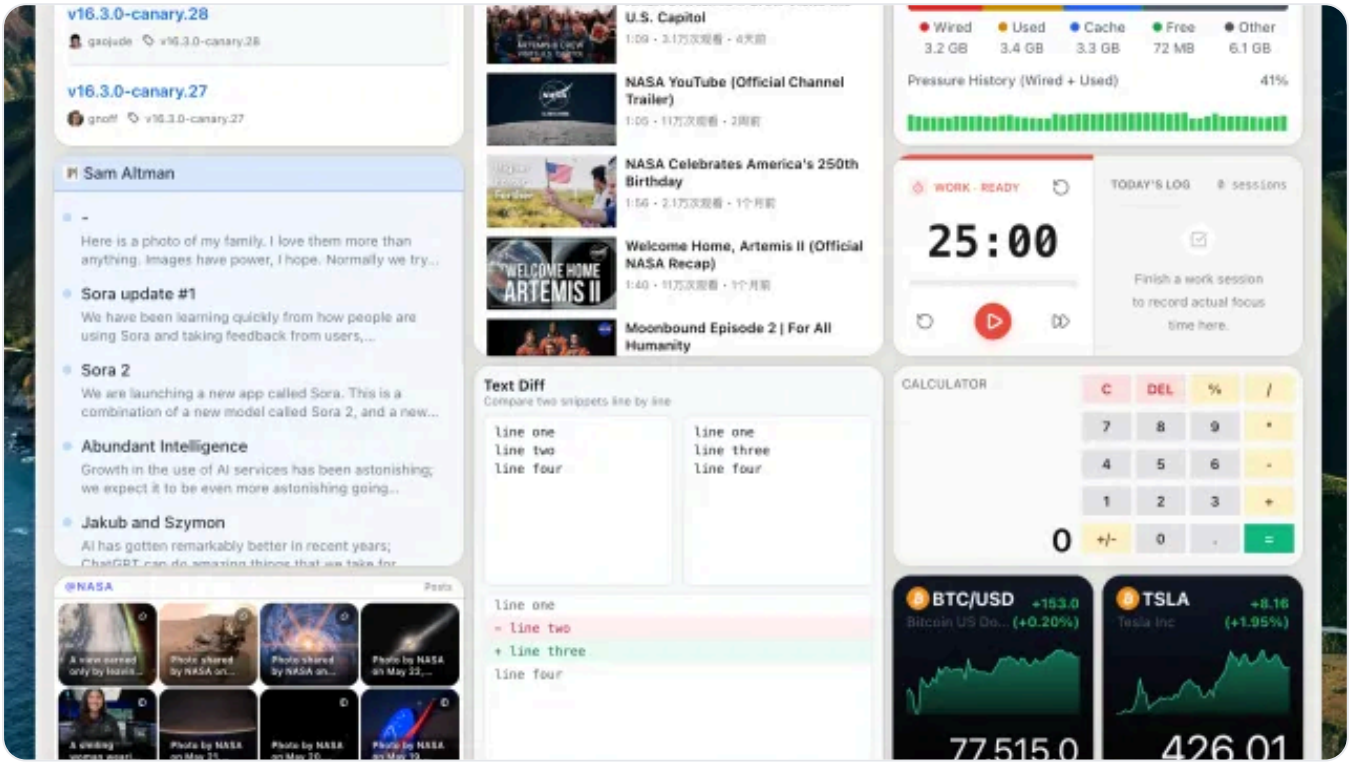
# Kepo

AI-powered Mac widgets that turn webpages, feeds, and dashboards into a live desktop panel.



## About

Kepo is a Mac widgets app that uses AI to turn webpages, RSS feeds, dashboards, and small tools into live desktop panels. It is built for people who want fast, glanceable access to the things they track most, without opening a browser tab every time. You can use ready-made widgets, generate your own from a description, and keep them in one panel that opens with a shortcut.

## What is Kepo?

Kepo is a Mac widgets app for building and using a Mac widgets panel that keeps important live information close at hand. The app turns RSS feeds, social feeds, market

shortcut. It is aimed at reducing tab switching by letting you check a page or feed from one desktop view instead of jumping between browser windows.

Kepo also includes an AI-based creation flow. If you do not want to start from scratch, you can browse ready widgets from the store. If you do want something custom, you can describe the widget you need and let the app generate a usable component. That makes Kepo a mix of a widget library and a Mac widgets builder.

## Key features

Kepo focuses on Mac widgets that are practical, lightweight, and update-friendly.

- **Shortcut-ready panel:** Open your widgets from one panel instead of navigating to each source separately.
- **Ready widgets:** Browse widgets for feeds, prices, news, developer tools, and daily dashboards.
- **AI widget generation:** Describe a widget idea and Kepo creates a working widget component.
- **Custom sources:** The app can turn many webpages, RSS feeds, social media sources, market data pages, internal pages, and small tools into widgets.
- **Multiple use cases in one place:** Keep RSS, social media, prices, monitoring views, and utility tools together.
- **Local data handling claim:** Kepo says page reads, API requests, and data shaping happen on your Mac.
- **Fresh updates:** Widgets stay in the panel and are meant to update as the source changes.
- **Plan-based limits:** The free plan includes 1 panel, store plugin installation, and 200 AI points; Pro adds 2,500 monthly AI points, multiple panels, skill plugin creation, AI widget creation, and AI widget editing.

Kepo is especially interesting as a Mac widgets tool because it combines a directory of ready options with AI-assisted creation. That makes the Mac widgets experience more flexible than a static widget gallery alone.

## How to use it

Getting started with Kepo is straightforward, especially if you only need a few Mac widgets.

**Download the app for Mac.** The site prominently offers a Mac download, and it also mentions a Windows waitlist.

**Choose a path.** You can open the store to find ready widgets or use AI to build a widget from your own description.

**Add a source.** Use an RSS feed, social feed, market data page, webpage, internal page, or small tool that you want to monitor.

**Place it in the panel.** Keep the widget in the panel so you can see it at a glance.

**Open it with a shortcut.** Kepo highlights shortcut-based access so you can check information quickly without leaving your workflow.

**Upgrade if needed.** The free tier is limited to one panel and 200 AI points, while Pro unlocks more creation and editing capacity.

If you are testing the app for the first time, the store is the easiest entry point. If you already know exactly what you want, the AI builder is the fastest way to create a Mac widgets setup that matches your workflow.

## Who it is for

Kepo is a strong fit for people who monitor the same sources every day and want those sources condensed into a Mac widgets panel.

**Professionals who track dashboards:** Useful for anyone watching prices, metrics, or internal tools.

**Developers:** The store mentions developer tools and daily dashboards, which suggests practical use for technical workflows.

**Content and community managers:** RSS and social media widgets make it easier to keep an eye on updates.

**Anyone who prefers quick checks over tab hunting:** If you repeatedly open the same pages, Mac widgets can save time.

**Users who want custom widgets without coding every piece manually:** The AI flow is designed for describing what you want rather than assembling everything by hand.

Kepo is less about decorative widgets and more about operational Mac widgets that help you monitor live information during the day.

## What to know before you use it

Kepo is useful, but it is not a universal replacement for every website or every data source.

- **Accuracy depends on the source:** If a widget pulls from an RSS feed, webpage, or API, the widget can only be as reliable as that source and its update cadence.
- **Not every site will be equally easy to turn into a widget:** The site says most webpages can work, but it does not promise perfect compatibility for every page structure.
- **The free plan is limited:** You get one panel and 200 AI points, so frequent creation or editing may require Pro.
- **Windows access is not fully available yet:** The site mentions a Windows waitlist, so Mac is the clear primary platform right now.
- **Use official tools when precision matters:** For financial decisions, operational monitoring, or compliance tasks, confirm critical data in the source system or an official dashboard before acting.

Kepo is best treated as a fast Mac widgets layer for everyday monitoring, not as a guaranteed substitute for the original source. When you need quick glances and fewer clicks, the app can help; when you need absolute authority, the underlying source should still be your final check.

## FAQ
